

CHAPEL HILL

TURF TYPE TALL FESCUE

CHAPEL HILL TALL FESCUE

Chapel Hill Tall Fescue--with a dark green color and fine leaf texture--is vigorous and disease resistant. Use it for permanent turf--in home lawns and professional plantings. In the National Turf Evaluation Program, Chapel Hill outshines its rivals in arid, cool humid and transition zones, rating high for genetic color, disease and drought resistance, and overall turf quality.

PLANTING

Plant Chapel Hill Tall Fescue alone, blended with other tall fescues or with other species, like Kentucky bluegrass or perennial ryegrass. Sow Chapel Hill in early fall or mid-spring. The estimated seed count is 207,000 seeds per pound; our recommended seeding density is 6-8 pounds per thousand square feet. Under ideal conditions, Chapel Hill germinates in 6-10 days. Keep soil moist until the grass is well-established, and cut to a height of 1-3 inches.

NTEP PROVEN PERFORMANCES

Chapel Hill excels in the following areas:

- GENETIC COLOR • SUMMER DENSITY • TURF QUALITY
- DROUGHT TOLERANCE • DISEASE RESISTANCE
- EXCELLENCE IN ARID, COOL HUMID AND TRANSITION ZONES
