Big League is a leading perennial ryegrass in a number of important turfgrass categories. Big League was specifically selected for overseeding due to its rapid germination and fast establishment. Big League provides cover quickly allowing for use sooner than other varieties. Big League is also a very attractive turf, scoring high in turfgrass color, quality and leaf texture and ranking second in overall quality at the recent NC State trial. In addition, once Big League has completely established, it will grow slower resulting in fewer mowings and less clippings.
SEEDING AND OVERSEEDING: Big League readily establishes on loosened bare soil or after verticutting existing turf for renovation and overseeding. For typical new seeding applications, apply at a rate of 5-7 lbs. per 1000 sq. ft. Periodic reseeding at 3-5 lbs. per 1000 sq. ft. maintains density for visual appearance and durability. For overseeding dormant warm season grasses, a rate of 30-40 lbs. per 1000 sq. ft. is suggested for golf course greens. And 7-10 lbs. per 1000 sq. ft. (300-450 lbs. per acre) for tees, fairways and roughs.

MAINTENANCE: Big League will form a tight knit turf under a broad range of soil types and environmental conditions, from full sun to medium shade. It will mow cleanly at heights of 1/2” and above. Big League can be maintained at fairway cutting heights when appropriate management practices are observed.
