Fastball RGL (Improved Rust and Gray Leaf Resistance) is a top-quality perennial ryegrass ideal for all fine turf needs. It’s dark green color and fine leaf texture make it an ideal choice for golf applications. Fastball RGLs excellent seedling vigor and fast establishment are ideal to crowd out weeds and fill in bare spots. These traits combined with improved wear tolerance make it a great choice for interseeding thinning sports fields. It’s resistance to pathogens also make it an ideal choice for overseeding dormant warm-season grasses. Fastball RGL leaves the competition swinging.
SEEDING AND OVERSEEDING: Fastball RGL readily establishes on loosened bare soil or after verticutting existing turf for renovation and overseeding. For typical new seeding applications, apply at a rate of 5-7 lbs. per 1000 sq. ft. Periodic reseeding at 3-5 lbs. per 1000 sq. ft. maintains density for visual appearance and durability. For overseeding dormant warm season grasses, a rate of 30-40 lbs. per 1000 sq. ft. is suggested for gold course greens. And 7-10 lbs. per 1000 sq. ft. (300-450 lbs. per acre) for tees, fairways and roughs.

MAINTENANCE: Fastball RGL will form a tight knit turf under a broad range of soil types and environmental conditions, from full sun to medium shade. It will mow cleanly at heights of 1/2” and above. Due to its tillering ability and compact profile Fastball RGL can be maintained at fairway cutting heights when appropriate management practices are observed.
