FORMULA ONE
RYEGRASS BLEND

GO WITH THE LEADERS... GRANDSLAM-STELLAR-FLASH II-ACADEMY II

- RICH DARK COLOR
- TIGHT COMPACT GROWTH
- NATURAL INSECT AND DISEASE RESISTANCE
- TOLERATES CLOSER MOWING
- RESISTS SCUFFING AND WEAR

Formula One is the high performance perennial ryegrass blend that's formulated for the turf professional. Its three components are carefully selected from four of the finest varieties available today... in active use on courses, sports fields and professional turfs across the country.

Formula One establishes quickly and aggressively fills-in to form a dense compact turf that remains attractive under traffic and active use. And it's economical as well. Formula One's natural insect and disease resistance, dark color, and heat and drought stress tolerance minimizes the need for extensive maintenance and irrigation budgeting.

Move to the front of the pack. Go Formula One.

ADAPTABILITY AND FEATURES

Formula One perennial ryegrass blend contains varieties that have excelled in trials conducted throughout the world.

It's three components are selected from;

- GRANDSLAM - NTEP leader for fairway and traffic performance
- STELLAR - Quick greenup. Better gray leaf spot resistance
- FLASH II - Aggressive and dark green. An overseeding favorite
- ACADEMY II - Dense and compact. Mows cleanly, transitions easily

It's widely adapted to the cool season areas, and performs equally well in overseeding of dormant Bermudagrass in transition and warm season areas.

Formula One tolerates traffic and stress with the ability to quickly recuperate from any injury and wear. A broad genetic base improves resistance to troublesome turfgrass diseases including leaf spot, rust, brown patch, red thread and snow mold. Formula One also demonstrates natural resistance to above ground feeding insects, including billbugs and chinch bugs. The healthier turf acts to inhibit weed invasion during periods of drought and heat stress.

AREAS OF USE

- **GOLF COURSE TEES AND FAIRWAYS**
- **RESIDENTIAL LAWNS, CORPORATE TURF**
- **ATHLETIC FIELDS**
- **OVERSEEDING DORMANT BERMUDAGRASS**
- **SUN AND SHADE**

IDEAL FOR OVERSEEDING

The Formula One blend of elite perennial ryegrasses combines the best possible qualities for establishing or overseeding cool season athletic and residential turf.

In addition, it's ideal for golf course turf that has been damaged by traffic or insect/disease invasion, or to extend the playing season of dormant Bermudagrass in warm season turf.

Formula One establishes quickly, forming a dense dark green turf that mows cleanly and is easier to maintain. It aggressively repairs damaged areas.

Formula One transitions fairly well with Bermudagrass during the late spring greenup period. However, in regions where greenup is earlier or a smoother transition is desired, the addition of Starlite poa trivialis and /or Baton intermediate ryegrass, should be considered.

SEEDING AND OVERSEEDING Formula One readily establishes on loosened bare soil or after verticutting existing turf for renovation and overseeding. For typical new seeding applications, apply at a rate of 5-7 lbs per 1000 sq ft. Periodic reseeding at 3-5 lbs per 1000 sq ft maintains density for visual appearance and durability. For overseeding dormant warm season grasses, a rate of 30-40 lbs per sq ft is suggested for golf course greens. And 7-10 lbs per sq ft (300-450 lbs per acre) for tees, fairways, and roughs.

AUTHORIZED DEALER

MAINTENANCE Formula One will form a tight knit turf under a broad range of soil types and environmental conditions, from full sun to medium shade. It will mow cleanly at heights of 1/2 in. and above. Due to its tillering ability and compact profile, Formula One can be maintained at fairway cutting heights when appropriate management practices are observed.
