Titanium 2LS is setting the bar high for the next generation of tall fescue cultivars. Titanium 2LS exemplifies the perfect high-quality turfgrass; it’s dark green, very dense and has excellent wear tolerance. Titanium 2LS is an excellent choice for sod farms and other applications where only the best variety will do. In addition Titanium 2LS is very drought tolerant, keeping its great looking appearance late into the summer even under less-than-ideal conditions. Titanium 2LS is also able to grow successfully in soil that has low fertility. And with all MVS varieties that carry the Lateral Spread brand, Titanium 2LS has aggressive lateral spread ability.
SEEDING AND OVERSEEDING  Tall fescue prefers warmer soil for germination, typically 55°F to 58°F. In the Transition zone this means early spring and early fall. Further north, late spring and late summer is preferred. Titanium 2LS should be sown at a rate of 6 to 9 lbs per 1000 sq ft (275 to 400 lbs per acre), lightly covered with soil and kept moist until after the first cutting. Maximum density is achieved by planting with a slicer/seeder or following aerification, and with the application of a starter fertilizer. First mowings are generally within three weeks, or when plants first reach 3 in. in height. Overseed existing tall fescue at a rate of 225 to 300 lbs per acre.

MAINTENANCE  Titanium 2LS natural dark color, density and pest resistance minimize the need for extensive maintenance. Generally 2 to 3 pounds of nitrogen as part of a balanced fertilizer applied annually is all that’s required. Cutting heights should range between 2 to 3 inches. Under controlled conditions heights down to 1 inch can be satisfactorily maintained.
