

SLUGGER
PERENNIAL RYEGRASS

- DARK COLOR
- DENSE/COMPACT
- RAPID ESTABLISHMENT
- QUICK TO RECUPERATE
- MOWS CLEANLY

ATTRACTIVE AND PLAYABLE

Slugger perennial ryegrass is a dense compact variety intended for cool season usage as well as dormant bermudagrass overseeding.

Slugger rapidly establishes in most conditions and quickly fills in forming a durable uniform playing surface at fairway mowing heights. Slugger exhibits a broad range of insect and disease resistance. And with its dark genetic color requires only normal maintenance to provide excellent visual appearance and playability. However, it also responds well to regimes where higher levels of fertility are employed to extract top performance.

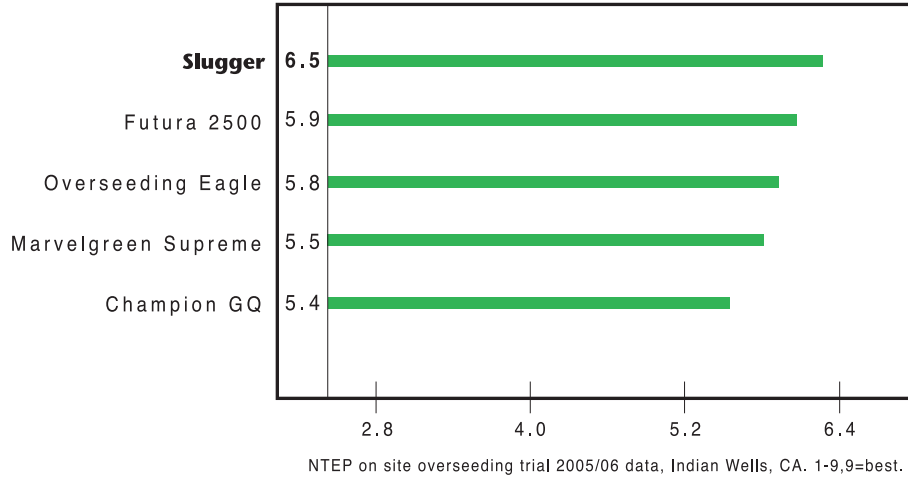

Whether by itself or in mixtures, let Slugger keep you in the game!!! Suggested for golf and sports turf, commercial landscape, and overseeding applications.

PERENNIAL RYEGRASS

TURF FACTS

FAIRWAY OVERSEEDING PERFORMANCE

Slugger rapidly forms a dense durable turf that is both attractive and functional. Slugger maintains this excellent appearance throughout the playing season with only normal fertility.

AREAS OF USE

○ OVERSEEDING

○ GOLF COURSE FAIRWAYS/TEES

○ COMMERCIAL LANDSCAPE

○ SPORTS TURF

○ HIGH USE AREAS

TURF DENSITY

| | |
|---------------------|------------|
| Slugger | 8.3 |
| Futura 2500 | 7.0 |
| Overseeding Eagle | 7.0 |
| Champion GQ | 6.7 |
| Marvelgreen Supreme | 6.3 |

Whether the application is golf fairway or residential turf, the ability of a ryegrass to retain its density under conditions of play and use is a determining factor in the overall process.

NTEP trial, Indian Wells, CA. 1-9,9=most dense

TURF COLOR

| | |
|---------------------|------------|
| Slugger | 7.0 |
| Futura 2500 | 6.7 |
| Overseeding Eagle | 6.7 |
| Marvelgreen Supreme | 6.3 |
| Champion GQ | 5.7 |

Slugger benefits from a genetically darker green color. Not only does this enhance appearance but does so at lower fertility levels than lighter varieties.

NTEP trial, Indian Wells CA. 1-9,9=darkest color

SEEDING AND OVERSEEDING Slugger readily establishes on loosened bare soil or after verticutting existing turf for renovation and overseeding. For typical new seeding applications, apply at a rate of 5-7 lbs per 1000 sq ft. Periodic reseeding at 3-5 lbs per 1000 sq ft maintains density for visual appearance and durability. For overseeding dormant warm season grasses, a rate of 30-40 lbs per sq ft is suggested for golf course greens. And 7-10 lbs per sq ft (300-450 lbs per acre) for tees, fairways, and roughs.

MAINTENANCE Slugger will form a tight knit turf under a broad range of soil types and environmental conditions, from full sun to medium shade. It will mow cleanly at heights of 1/2" and above. Due to its tillering ability and compact profile, Slugger can be maintained at fairway cutting heights when appropriate management practices are observed.
