Forage Bermudagrass Blend

**BLEND CONTAINING  
HERITAGE, KF194,  
AND CHILLY VERDE**

**EXCELLENT QUALITY  
FORAGE VARIETIES**

**GENETIC DIVERSITY  
MAKES IT WIDELY  
ADAPTABLE**

**WINTER HARDY**

**LOW MAINTENANCE**

**MULTIPLE USES**

**READY TO GO TO WORK**

Foreman® Forage Bermudagrass Blend contains three specially selected forage and dual-purpose bermudagrass varieties with geographically diverse back grounds. The genetic diversity of this blend makes it adaptable to a wide range of regions and uses. Foreman contains a new dual-purpose variety Heritage, produced in the Western High Desert region of Eastern Oregon. Heritage is hearty and persistent with excellent winter hardiness to survive and green up the next spring. It is lateral growing and withstands close grazing with fine stems and excellent forage quality. Foreman also contains KF194, a time-tested forage type bermudagrass widely recommended in the Southeast. KF194 bermudagrass is produced in the Southwest and has the same winter hardiness, yield, persistence, and quality as Cheyenne and CD90160. Chilly Verde is the third variety that completes the Foreman Blend. This cultivar is distinguished by its wide, soft leaves and rapid establishment. Developed in North Carolina, Chilly Verde demonstrates excellent persistence through both cold winters and hot summers. It is also well adapted to a broad range of soil types and performs across a wide soil pH range of 4.5 to 8.0. The genetic diversity of this blend makes it widely adaptable and an excellent choice for hay, grazing, and soil conservation. Foreman bermudagrass is ideal for horses, cattle, and small ruminants.
