

**RANAHAN**  
TETRAPLOID RYEGRASS

- **FULL SEASON PRODUCTION**
- **LATE MATURITY**
- **EXCELLENT YIELDS**
- **DISEASE RESISTANT**
- **GUARANTEED TETRAPLOID**

**A FORAGE AS IMPORTANT AS YOUR TOP RANCH HAND**

**Ranahan** is an ideal choice for beef and dairy cattle providing season long production. The higher intake and more digestible fiber of tetraploid ryegrass can mean greater animal performance. **Ranahan**, with its erect growth is suitable for green chop, baleage, silage or hay. Late maturity or delayed heading allows for extended grazing or a greater harvest window. The more open sward of a tetraploid ryegrass allows for more diversity of plant species which contribute to soil health, nitrogen fixation, and rumen fill. **Ranahan** was developed by utilizing the highest-yielding and disease resistant Southern ryegrass cultivars crossed with Peak Plant Genetics private plant collection.

*QUALITY ASSURANCE: To ensure the highest level of quality, every 55,000 lb. lot of Ranahan is tested for mechanical purity, germination and ploidy levels.*

2019 LOUISIANA STATE UNIVERSITY AND 2018 MISSISSIPPI STATE UNIVERSITY FORAGE TRIAL. YIELD FROM MULTIPLE LOCATIONS.

**SEEDING AND OVERSEEDING** Ranahan readily establishes on loosened bare soil or in close-cut harvested fields. For typical new seeding, applications apply at a rate of 40-45 lbs. per acre. For overseeding and cover crop use seed at a rate of 25-35 lbs. per acre for pastures and 3-5 lbs. per acre into thinning alfalfa stands. Use a Brillion seeder, a no-till drill, or broadcast followed by a cultipacker. Seed to soil contact is critical to successful germination and establishment. For highest hay quality harvest at initial boot stage.
