PERFORMANCE PLUS GRAY LEAF SPOT RESISTANCE

GLS plus perennial ryegrass blend is the professional's choice for demanding applications that call for top playability as well as insurance against the devastating Gray Leaf spot and companion diseases like warm temperature brown patch and pythium.

The components of GLS plus, selected from Apple GL, Stellar GL, Homerun, Dart, and Flash II are in their own right individual NTEP performers in color, density, aggressiveness, and wear tolerance. In addition each has an improved resistance to one or more of these troublesome diseases.

GLS plus establishes easily and aggressively fills-in forming a dense compact turf, dark in color, that's suitable for golf course, athletic field, and commercial turf applications.

When performance is demanded and gray leaf spot resistance is desired – be prepared – Go with GLS plus.
