

Rio is a top-rated seeded bermudagrass variety developed by the Johnston Seed Company. Rio exhibits excellent cold and frost tolerance as well as early spring greenup making it a great choice for not only the southern zone but also areas in the transition zone where bermudagrass is used. Rio germinates quickly and was the #1 NTEP rated variety in establishment. Rio has excellent turf quality and good wear tolerance. Rio is dark green and fine-bladed creating a very dense turf. Rio is drought and heat tolerant and can be used in a number of different applications.

EXCELLENT TURF QUALITY

SUPERIOR COLD AND FROST TOLERANCE

EARLY SPRING GREENUP

GOOD WEAR TOLERANCE AND RECOVERY

#1 NTEP RATED FOR ESTABLISHMENT

SEEDING

Rio should be planted in areas of full sun when soil temperatures reach a consistent 65 F (18 C) and are on the rise. Plant 2-3 lbs/1000 sq ft (1-1.5 kg/100 sq m) in a well-prepared firm seedbed. Cover seed with no more than 1/4 inch (6 mm) of soil. Maintain adequate soil moisture using frequent but light irrigation for optimum germination. Seedlings should emerge in 10-14 days.

MAINTENANCE

Rio can be maintained at mowing heights from 0.4" - 1" (1.3-5 cm). Applying 3-5 lbs of nitrogen per 1000 sq ft (1.5 - 2.5 kg/100 sq m) per growing season is adequate. Do not remove over 1/3 of the leaf blade per mowing for healthy turf. More frequent mowing at shorter heights will result in a finer, more dense turf.
