CENTENNIAL

CREEPING BENTGRASS BLEND

It takes a special pair of varieties to create a functional blend; they must be indistinguishable, yet genetically unique. Identical in critical traits such as establishment, color, density, leaf texture, disease resistance and overall turf quality. Ensures a consistent, uniform playing surface that does not show segregation. Piper and Oakley, while genetically quite different, perform almost identically. But being selected from different parents ensures they are stronger together.

ICONIC
POWERED BY LATERAL SPREAD TECHNOLOGY

PERENNIAL RYEGRASS BLEND

Our all-LS blend of elite grass varieties bred specifically to excel under wear. Self-repairing lateral spread tillers fill in bare spots in heavy traffic areas. Gray Leaf Spot resistant, dark green color, fine leaf texture and lateral spread ability create a dense sward.

OPTIMUM

TALL FESCUE BLEND

Top-rated tall fescue varieties to create a premium blend of tall fescue. This blend performs exceptionally well across multiple US climatic zones. NTEP top group rated for Gray Leaf Spot and Brown Patch resistance, shade tolerance, traffic stress, drought tolerance, and density.

VANGUARD

FINE FESCUE MIX

Formulated with only top-performing NTEP cultivars from four different species: Creeping Red Fescue, Chewings Fescue, Hard Fescue, and Slender Creeping Red Fescue. We've curated the optimal fine fescue mix with four pillars in mind; diverse disease resistance, shade tolerance, turf quality and performance in both low and high maintenance regimes. An added bonus is the built in salt tolerance exhibited by Seamist Slender Creeping Red Fescue!

365ss

KENTUCKY BLUEGRASS BLEND

The best blend for what sports turf professionals demand. 365ss is extremely fast to germinate and establish creating a dense sward that offers superior sod strength. Its dark green color and excellent turf quality provide a beautiful field that looks good year-round. Developed to hold up to extreme wear and traffic, and quick recovery allows for more use.

BENTGRASS

AU VICTORY
CREEPING

Stands up to the harshest conditions. AU Victory has quick establishment, high shoot density and good color. Turf quality remains strong after late summer stress periods and has quick recovery.

BARRACUDA
CREEPING

Upright and aggressive with improved dollar spot resistance. Top quality group in current NTEP Green AND Fairway trials with leading scores in texture, greenup, and frost tolerance as well.

OAKLEY
CREEPING

Topping the NTEP charts for both Greens and Fairways/Tees! Oakley shows strong seedling vigor and has a beautiful medium green color. The versatility of strengths makes this a standout variety, Dollar Spot resistance, fine leaf texture and density throughout the entire playing season.

PIPER
CREEPING

Piper exhibits excellent resistance to Dollar Spot and Brown Patch. Top NTEP group for each Spring, Summer and Fall Density trials and holds up to traffic stress. Piper has minimal thatch and canopy puffiness, making this an exceptional putting green surface.

PIRANHA
CREEPING

Ultra dense variety developed specifically to tolerate heat and a number of other stressors that destroy most bentgrass. Piranha has excellent resistance to dollar spot as well as brown patch.

SHARK
CREEPING

Aggressive, bright, dark green color, with high shoot density. Improved summer performance and disease resistance, particularly to dollar spot and take-all patch. Tiger Shark in EU countries.

MUSKET
COLONIAL

Quick to recover in the spring, greening up faster than most other varieties. Musket was developed from germplasm that combined early spring green-up with improved summer performance.

RYEGRASS

APPLE 4SGL NEW PERENNIAL

Developed for performance in challenging environments. Shown improved salt tolerance in the latest NTEP trials, making it better equipped for areas with poor water quality or saline soils.

BIG LEAGUE PERENNIAL

Specifically selected for overseeding due to its rapid germination and quick establishment. Big League is a very attractive turf, scoring high in turfgrass color, quality, and leaf texture.

BLACKCAT II PERENNIAL

Bred for both cool-season and overseeding performance. Very dark green color and quick establishment and fill-in. Mows cleanly and recovers well from traffic and heavy wear.

BLACKSTONE PERENNIAL

Blackstone has excellent turf quality, ranking third in the latest NC State winter overseeding trial. Blackstone exhibits a very dark green color and retains its color throughout the season.

BLACK PEARL PERENNIAL

A very dark green, ranking in the top 3 entries of the recent NC State overseeding trial. In addition, Black Pearl scored in the top group for turf quality, having fine blades and excellent density.

BLACK SPARROW PERENNIAL

Selected for aggressive tillering, good growth during cooler temperatures, darker green color and improved resistance to winter leaf spot. Highly rated for fine leaf texture and mowing quality.

FASTBALL 3GL PERENNIAL

Excellent turf quality, gray leaf spot resistance and rated in the top statistical group in the recent NTEP trial, and excels in Northern climates with first-rate cold tolerance.

FASTBALL 4GL NEW PERENNIAL

Cutting-edge genetics with outstanding visual appeal. Ranked among the top entries for overall turf quality. Its exceptional density, rich dark green color, and fine leaf texture make it a standout.

GRAND SLAM G-LS NEW PERENNIAL

Engineered for top-tier performance and versatility. In the NTEP trials, it ranked among the best for overall turf quality, delivering a dense, uniform, and attractive surface across diverse environments.

HOMERUN G-LS NEW PERENNIAL

Built for speed, strength, and superior turf quality. Rapid establishment, strong disease resistance, traffic tolerance and high density, make it an ideal solution for high-demand turf situations.

SLUGGER 3GL PERENNIAL

Slugger 3GL has excellent color and leaf texture, producing a dense attractive turf. Slugger 3GL has excellent gray leaf spot resistance, excellent winter-hardiness, and grows quickly in the spring.

STELLAR 4GL PERENNIAL

4th gen Gray Leaf Spot resistant entry! Excels in NTEP traffic stress trials and beats Crown Rust and Pink Snow Mold handily. Combines elite turf quality and some of the fastest Divot Recovery around!

SUPERSTAR GL PERENNIAL

Gray Leaf resistance and NTEP proven for great Northeast Turf Quality. Superstar GL is proven to handle cold, drought stress, and reduced irrigation. With some of our earliest Spring Green-Up, and dark green genetic color, make Superstar GL your 1st Perennial Ryegrass choice!

TORSION PERENNIAL

Selected for improved turf quality and strong lateral spread ability. Torsion has excellent wear tolerance and a beautiful dark green color making it an ideal choice for sports turf applications.

BREAKOUT II TURF-TYPE ANNUAL

The next generation of Smooth Transition Technology! Breakout combines Perennial Ryegrass-like quality and color with the easy transition and lowered inputs of an Italian ryegrass.

SOLSTICE IV INTERMEDIATE

Bred for ease of transition as well as improved overseeding performance in value-oriented, lower-maintenance situations. Great color and density. Excellent tolerance to traffic and wear.

Designates a variety that has been approved by the Alliance for Low Input Sustainable Turf. These varieties have been independently tested and show the ability to maintain excellent turf quality under the harshest conditions, requiring less water, fertilizer and chemicals to do so.

TALL FESCUE

AVENGER III

Adapted to both high heat and extreme cold climates. Avenger III pushes the tall fescue boundaries. Excels with Brown Patch resistance and is one of the highest NTEP scores under Drought Stress.

DYNAMITE G-LS

Produces rapidly, establishing quick tillering plants that are perfect for shade and sod production. It stands up to tough diseases like Pythium blight and maintains high turf quality.

FIRECRACKER G-LS

Lateral Spread toughness with the first NTEP-proven resistance to Gray Leaf Spot! A new standard for durability thanks to aggressive recovery and density, it shines in summer's heat.

RAPTOR LS

Combines top Turf Quality at NTEP Northeast & Transition Zone locations with selective breeding for tough Lateral Spread™ parents. Raptor LS is dark green with excellent seedling vigor, wear tolerance, and compact growth for low mowing heights.

SPYDER 2LS

Excellent NTEP scores across all US test locations. Spyder 2LS pairs fine leaf blades with Lateral Spread tillering, recovery, and disease resistance to crowd out weeds for a pure turfgrass stand.

STEALTH

Quick, aggressive establishment, recovery from summer heat and disease plus the ability to be low-mowed. It has fine texture, and performs well for turf quality in the Northeast and Transition.

SUPERSONIC

Ranked at the top of the NTEP in all categories with improved drought resistance and excellent performance in the southeast region. Fine leaf texture, early spring green-up, high seedling vigor.

TITANIUM G-LS

Gray Leaf and Lateral Spread, the ultimate combo! The newest Titanium follows the family lineage of heat and drought tolerance, outstanding NTEP turf quality, sod strength and robust disease resistance.

VALKYRIE LS

Excellent wear tolerance and holds up to traffic very well. Its fine leaf texture and dark green color make it an ideal choice for premier turf needs. High seedling vigor allows it to out-compete weeds.

POA TRIVIALIS

LASER

Laser germinates quickly and can be cut immediately after overseeding, making it a natural choice for winter overseeding in the south.

STARLITE II

Rich, dark color, compact and dense, uniform texture. For smoother overseeding transitions and moist shaded sites.

COSMIC BLEND

This blend combines the unique traits available in both Starlite II and Laser for a poa triv solution that offers great color and leaf texture along with the ability to tolerate a low height of cut.

WARM-SEASON

RIO ELITE BERMUDAGRASS

Rio exhibits excellent cold and frost tolerance as well as early spring greenup. Rio germinates quickly, has excellent turf quality and good wear tolerance. Rio is dark green, fine bladed and dense.

PROFESSIONAL'S CHOICE BERMUDAGRASS BLEND

A premium blend of two highly-rated turf-type bermudagrass varieties—North Shore SLT and Highlander. These two varieties offer superior turf quality, and rank high in the NTEP.

HERITAGE COLD TOLERANT BERMUDAGRASS

A great workhorse variety with several key characteristics; excellent cold tolerance, fine leaf texture, improved density, and nice genetic color. This cultivar is a great option for the landscape market.

Designates a variety that has our patented Lateral Spread Technology. These varieties were bred specifically to excel under intense wear. They spread by tillers to form a dense, wear tolerant, self-repairing turf.

FINE FESCUE

BEACON II HARD

A use-anywhere selection when soil and fertility are lacking, and irrigation is absent. Year-round dense sward, aggressive establishment, and drought tolerance that is 2nd to none in the latest NTEP trials.

JETTY HARD

Jetty ranked highest in the NTEP for shade tolerance. It can withstand low mowing and is one of the darkest hard fescues available. In addition, it has excellent disease resistance and drought tolerance.

CARDINAL II CREEPING RED

Cardinal II scored high in all turf-quality ratings of the NTEP including color. It is a dark green cultivar with improved salt tolerance that can withstand lower mowing heights.

HARBOR MR CREEPING RED

Performs well with little to no plant injury when Mesotrione is applied during establishment. Excels in shade and drought tolerance, and rated well for spring green-up, summer and fall density.

NAVIGATOR III CREEPING RED

Performs in shaded and poorly irrigated areas where fertility and pesticide inputs are lacking. Continues its excellence in turf quality and drought stress while improving traffic stress and shade tolerance.

SEAMIST SLENDER CREEPER

SeaMist is a revolutionary slender creeping red fescue that can germinate in water that is up to 40% as saline as sea water. SeaMist an ideal choice in areas where effluent water is used to irrigate.

COMPASS II CHEWINGS

Compass II has excellent shade tolerance. It ranked at the top of the NTEP turf quality ratings under low mow conditions. Compass II has great disease resistance and improved salt tolerance.

RADAR II CHEWINGS

At the top of its class in drought resistance and summer density. It's no surprise that it also ranked highest for establishment and traffic stress. Widely adapted from the transition zone northward.

BLUE HORNET SHEEP

Germinates rapidly but grows extremely slow under little or no inputs. Blue Hornet has improved adaptability to heat and marginal soils while also exhibiting better persistence in drought.

KENTUCKY BLUEGRASS

ACOUSTIC

A top performer in the NTEP overall mean quality, along with top ratings on summer density and dark green genetic color. Truly this variety stands on its own and comes through loud and clear!

BLUE NOTE

Elite, compact America-type that is #1 in the NTEP. Broad-spectrum disease and insect resistance, drought tolerance and excellent winter color. High sod strength. Increased shade tolerance.

BOLT

Improved Washington/Jefferson type. Ranked first in seedling vigor and % establishment, it allows this variety to crowd out weeds, suppress poa and form a dense sward.

JOURNEY NEW

This Eurasian selection is a great fit for multiple applications. Journey exhibits aggressive growth, medium-dark green color, and scored very well in low maintenance drought trials.

LEGEND

Aggressive Midnight-type, dark green. Ideal for use in both high and low maintenance applications. Very fine leaf texture and aggressive. Ideal for any application you need.

NAVY

An early maturing KBG that exhibits excellent spring green-up and improved disease resistance. Medium-dark color which blends well with a wide range of cool season mixes.

SHADOW HAWK

A versatile performing Shamrock type Kentucky Bluegrass. Shadow Hawk highlights quick spring green-up, shade tolerance, density, and traffic stress, and is adapted for multiple climates.

FAHRENHEIT 90

A Poa species that exhibits improved drought and heat tolerance as well as better disease resistance in more humid environments. Good color and texture, make this a solid performer.

Seed coating enhanced with a complete nutrient package. Captures and slowly releases just the right amount of moisture to the seed as needed during germination. Ensures better establishment leading to a thicker lawn with less weed pressure.

We Believe in Better.

They say competition brings out the best in you; nowhere is that more relevant than in turfgrass breeding. From beginning to end, Mountain View Seeds varieties are put through rigorous testing. Only the strongest will survive and make their way into a bag of premium grass seed from MVS. But the testing and evaluation doesn't end there. Additionally, Mountain View Seeds varieties are constantly University-tested for regional adaptability and the biggest test of all comes on the field.

Many varieties perform well under ideal conditions. But the true test of a variety is how it performs in the real world. Any shortcoming will reveal itself on the field, where our varieties consistently outperform.

Mountain View Seeds is committed to promoting sustainable turfgrass cultivars and has partnered with the A-LIST® program. The A-LIST (Alliance for Low Input Sustainable Turf) seeks to define and promote turfgrass varieties that continue to exhibit good turf quality in less-than-ideal conditions.

RESEARCH & DEVELOPMENT

We're devoted to developing and acquiring grass seed of the highest genetic quality. We continually look for varieties with improved resistance to disease and pests. You'll find our varieties on the front page of the NTEP. We work closely with the research programs at Rutgers and other universities. With a full spectrum of turf varieties, we can fulfill all your seed needs.

 Pinnacle Ag Research Center (PARC) specializes in variety testing, management practices, and environmental impact studies. Located in the heart of the transition zone where plants are exposed to hot summers and cold winters. These extremes allow us to perform trials designed to alleviate stress and the pests associated with it.

 PEAK Plant Genetics is responsible for releasing more new turfgrass and forage varieties than any other private company in the USA. Every year over 150,000 individual plants and 1,500 turf plots are planted on the 80-acre research farm located in the Willamette Valley.

PRODUCTION & CONDITIONING

Our growers rotate the full-spectrum of grasses with more than 50 other crops. Crop rotation preserves the soil fertility and produces the clean, high-quality seed the Willamette Valley is famous for. We are proud of the quality seed our growers produce. Need 100 tons of turf seed in a hurry? Our state-of-the-art conditioning facility cleans up to 200,000 pounds a day.

BLENDING & PACKAGING

We have seven blending and packaging lines that can produce up to 750,000 pounds a day. We can create attractive packages that look good on the shelf with seed that performs well in the field.

SERVICE & DELIVERY

You'll always talk to a real person when you call Mountain View Seeds, someone who'll answer the questions you have. Our expanded warehouse and loading docks help allow us to ship more product sooner. Always delivering the right seed, in the right package, to the right place—on time.

Optimum Platinum Blend of Tall Fescue on the track at Churchill Downs in Louisville, KY
