

SeaMist is a revolutionary slender creeping red fescue that can germinate in water that is up to 40% as saline as sea water. This extreme salt tolerance makes SeaMist an ideal choice in areas where effluent water is used to irrigate or in areas that are exposed to sea water and spray. SeaMist has excellent seedling vigor that results in a high establishment rate. SeaMist is a very dense turf with excellent turf quality, rating #1 in the recent NTEP trials. In addition to great shade tolerance, SeaMist has excellent wear tolerance and early spring green up.

HIGH SALT TOLERANCE

VERY DENSE TURF

EARLY SPRING GREEN UP

#1 NTEP IN TURF QUALITY

GOOD VIGOR AND ESTABLISHMENT

EXCELLENT WEAR TOLERANCE

AREAS OF USE

- Environmentally Sensitive Areas
- Roadsides & Ski Slopes
- Golf Course Roughs
- Wildflower Mixes
- Residential Turf

NTEP DATA

Variety	Turf Quality CA Golf Club	Turf Quality Shade	Turf Quality Traffic	Spring Density
SeaMist	7.0	7.8	5.8	6.5
Seabreeze GT	5.6	7.6	4.4	4.8
Bar Frt 5002	6.2	7.5	5.8	5.7
Marvel	6.4	7.3	4.9	5.8
Kent	5.8	6.6	4.8	5.8
LSD	1.2	1.0	1.1	0.6

2015 NTEP Data. Turfgrass Quality and Other Ratings 1-9; 9=Best

SEEDING

Broadcast seed at 3-5 lbs. per 1,000 sq. ft. for most applications. Erosion control and reclamation areas and ski slopes should be seeded at 150-200 lbs. per acre depending on the turf density desired. Seed golf course roughs at 200 lbs. per acre.

MAINTENANCE

SeaMist quickly establishes over a broad range of growing and environmental conditions in most soils, particularly when initial irrigation is available. On sensitive areas and slopes, levels of maintenance can be minimal with no fertilization and one mowing per season. In other turf areas, whether used alone or in combination with other grasses, maintain a stand at 1.5" to 3" in height. A starter type fertilizer, applied at time of seeding, will greatly enhance establishment and "fill-in".
