

# TORSION

## PERENNIAL RYEGRASS

### TORSION

PERENNIAL RYEGRASS

- LATERAL SPREAD VARIETY
- EXTREMELY DENSE TURF
- WITHSTANDS MOWING DOWN TO 4/10"
- EXCELLENT TURF QUALITY
- IMPROVED WEAR TOLERANCE

### LOW MOWING, HIGH DENSITY RYEGRASS

**Torsion** was selected for improved turf quality and strong lateral spread ability. **Torsion's** aggressive tillering allows it to self-repair damaged turf. **Torsion** has excellent wear tolerance and a beautiful dark green color making it an ideal choice for sports turf applications. In addition, **Torsion** can help reduce maintenance costs and time, thanks to its' slow growing characteristic that requires fewer mowings and produces less clippings. **Torsion** establishes quickly and has an extremely dense turf as well, producing a thick sward ideal for sod use.

#### LATERAL SPREAD TECHNOLOGY LS™

*Mountain View Seeds Lateral Spread Technology, is the term MVS applies to the process of seeking turfgrass with greater potential for increased stand density, particularly under stress, and self-recuperation from traffic, thinning, or injury.*

**DATA**

VARIETY	FINENESS OF LEAF	SLOW REGROWTH	WINTER COLOR	SUMMER COLOR
<b>TORSION</b>	<b>7.6</b>	<b>8.6</b>	<b>6.5</b>	<b>7.9</b>
FANDANGO	5.9	5.9	6.2	5.4
FRONTLINER	6.4	5.3	4.9	5.8
BARLENNIUM	5.1	7.0	7.6	7.4
PLATINUM	5.8	6.0	7.1	6.3
KOKOMO	5.0	6.7	8.2	7.8
JUBILEE EG	5.7	6.0	6.0	6.2
CAPRI	5.8	4.9	6.1	5.2

2017 STRI Trial - Table L1

**AREAS OF USE**

- HIGH-TRAFFIC AND HEAVY WEAR AREAS
- PROFESSIONAL SPORTS TURF
- TEES AND FAIRWAYS
- SOD PRODUCTION
- LAWN AND LANDSCAPE
- HOME LAWNS
- TOP-QUALITY OVERSEEDING FOR WARM-SEASON TURF

**SHOOT DENSITY**

**TORSION (HIGH)**

8.1

LOW

4.6

Torsion scored highest in the shoot density category, producing an extremely wear tolerant turf.

2017 STRI Trial - Table L1

**VISUAL MERIT/TURF QUALITY**

HIGH

8.1

**TORSION**

7.7

LOW

4.8

Torsion has excellent turf quality, scoring in the top statistical grouping.

2017 STRI Trial - Table L1

**SEEDING AND OVERSEEDING** Torsion readily establishes on loosened bare soil or after verticutting existing turf for renovation and overseeding. For typical new seeding applications, apply at a rate of 5-7 lbs. per 1000 sq. ft. Periodic reseeding at 3-5 lbs. per 1000 sq. ft. maintains density for visual appearance and durability. For overseeding dormant warm season grasses, a rate of 30-40 lbs. per 1000 sq. ft. is suggested for golf course greens. And 7-10 lbs. per 1000 sq. ft. (300-450 lbs. per acre) for tees, fairways and roughs.

**MAINTENANCE** Torsion will form a tight knit turf under a broad range of soil types and environmental conditions, from full sun to medium shade. It will mow cleanly at heights of 1/2" and above. Due to its tilting ability and compact profile Torsion can be maintained at fairway cutting heights when appropriate management practices are observed.
