DROUGHT TOLERANCE

Acoustic has improved drought tolerance, ranking near the high in the top third of the NTEP trial.

2021 NTEP Mean Drought Tolerance.

GENETIC COLOR

Acoustic is a dark green variety, ranking very high in the recent NTEP trial for genetic color.

2021 NTEP Mean Genetic Color.

SEEDING For most applications, Acoustic should be sown at 2-4 lbs per 1000 sq. ft. or 100-175 lbs per acre. Consistent watering is very important until after the first cutting. Acoustic is ideal for renovating existing turf that has been damaged or thinned by disease or wear. Overseed at 1 1/2 to 2 1/2 lbs per 1000 sq. ft.

MAINTENANCE Acoustic is versatile, growing well in both full and partial shade, and under both high and low maintenance programs. Mow as necessary, removing no more than 1/3 of the leaf. Acoustic can be maintained at 1/2" height when adequate moisture and nutrients are available. At a minimum, fertilize annually with 2 to 3 lbs of nitrogen per 1000 sq. ft. in a balanced formulation. More intensive programs produce a denser, more attractive turf.
