

— perennial ryegrass —

Blackstone is the ideal perennial ryegrass for all your fine turf needs. Blackstone has excellent turf quality, ranking third in the latest NC State winter overseeding trial. Blackstone exhibits a very dark green color and retains its color throughout the season. In addition, Blackstone establishes well, providing quality cover quickly. Blackstone was bred for improved transition, both into and out of the overseeding season. In addition, Blackstone's controlled growth during the season means fewer mowings and less clippings.

SEEDING

Blackstone readily establishes on loosened bare soil or after verticutting existing turf for renovation and overseeding. For typical new seeding applications, apply at a rate of 5-7 lbs/1,000 sq ft. Periodic reseeding at 3-5 lbs/1,000 sq ft maintains density for visual appearance and durability. For overseeding dormant warm season grasses, a rate of 30-40 lbs/1,000 sq ft is suggested for golf course greens. And 7-10 lbs/1,000 sq ft (300-450 lbs/acre) for tees, fairways and roughs.

MAINTENANCE

Blackstone will form a tight knit turf under a broad range of soil types and environmental conditions, from full sun to medium shade. It will mow cleanly at heights of 1/2" and above. Blackstone can be maintained at fairway cutting heights when appropriate management practices are observed.
